

Quality Feather Flag Systems

Add a new dimension to events and exhibitions with a Feather Flag.

As one of the most competitively priced systems on the market, the Hampshire Flag Company's Feather Flag is all you need to create dynamic interior and exterior displays.

Supplied as a compact and complete system, the Feather Flag fits neatly into a transport bag. Components consist of a strong aluminium sectioned pole, a quality water-based digitally dye printed feather flag, a rotator and a Vario drill to fix the system into the ground.

Choice is key which is why we supply the Feather Flag System in three popular sizes – 420cm x 85cm, 320cm x 85cm and 220cm x 85cm.

Our superior methods of printing means every one of our flags is manufactured to the highest standard. Each Feather Flag is water-base digitally dye printed in-house resulting in excellent colour matching and deep, rich colour contrasts. (See our Digitally Printed Textile brochure for more details on our printing methods).

The finishing reflects our exceptional attention to detail and Feather Flags are machine finished with a black heading to cover the pole, although other colour options are available on request.

To ensure this product meets our customers' requirements, the Feather Flag System can be purchased with or without a flag and as a 2m, 3m or 4m kit. Also available is an X-base with water pouch for internal or external hard standing, and a car wheel-base for external use on forecourts or at events.

Feather Flags – light, versatile and effective

Key features:

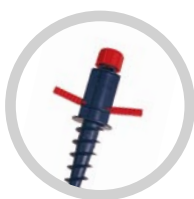

- Aluminium construction pole consisting of silver sections with a flexible rod at the top
- Bespoke design dye printed onto knitted polyester feather flag
- Vario drill with rotator that screws in to the ground to secure the pole
- Transport bag to house the assembly kit and flag
